1. GENERAL WARNING

1.1 – PLEASE READ THIS MANUAL BEFORE USING THE DEVICE

This manual contains the information necessary for proper installation and instructions for use and maintenance of the device, so please read the following instructions carefully. This documentation has been made with care, however, OSAKA assumes no responsibility for the use of it. The same applies to each person or company involved in the creation of this manual. This document is the exclusive property of which forbids any reproduction and disclosure and part thereof, unless it is expressly authorized. OSAKA reserves to provide functional changes at any time without notice..

1.2 – PLEASE READ BEFORE USING THIS MANUAL

This manual is part of the product and should be kept near the instrument for easy and quick reference.

The instrument shall not be used for purposes different from those described hereunder. It cannot be used as a safety device.
Check the application limits before proceeding.
Osaka Solutions reserves the right to change the composition of its products, even without notice, ensuring the same and unchanged functionality

1.3 – SAFETY PRECAUTIONS

- Check the supply voltage is correct before connecting the instrument.
- Do not expose to water or moisture: use the controller only within the operating limits avoiding sudden temperature changes with high atmospheric humidity to prevent formation of condensation
- **Warning:** disconnect all electrical connections before any kind of maintenance.
- Fit the probe where it is not accessible by the End User. The instrument must not be opened.
- In case of failure or faulty operation send the instrument back to the distributor or to "Dixell S.r.l." (see address) with a detailed description of the fault.
- Consider the maximum current which can be applied to each relay (see Technical Data).
- Ensure that the wires for probes, loads and the power supply are separated and far enough from each other, without crossing or intertwining.
- In case of applications in industrial environments, the use of mains filters (our mod. FT1) in parallel with inductive loads could be useful.

2. GENERAL DESCRIPTION

The **VEX 100 PA** module is able to drive a large variety of **stepper electronic expansion valves**.
XEV22D permits to regulate the superheat (SH) of the fluid that runs into refrigerating unit in order to obtain optimized performance and a functioning of the evaporator independent by climatic or load conditions. **VEX 100 PA** modules are equipped with two probe inputs, one for 4 to 20mA or 0 to 5V pressure transducer and another one for NTC-EU, NTC-US or Pt1000 temperature probe.
A LAN connection permits to transmit the pressure signal to others VEX modules in order to use only
one pressure transducer in multiplexed cabinet applications.
There are also two configurable digital inputs, the first one is free of voltage and the other ones is at
high voltage in order to simplify connections with cooling request signal.
With the useful display it's possible to see the value of superheat (SH), the degree of opening of the
valve or the probe values, the local keyboard allows programming the instrument without any other
devices.
To complete instrument equipment, a RS485 serial link permits to connect VEX 100 PA to Osaka monitoring and supervising systems.

3. PROBES RELATED TO THE VEX 100 PA

|		
Pressure	PP 08	-0,5 .. +7 bar
	PP 10	0 .. +10 bar
	PP 30	0 .. +30 bar
Temperature	NTC 1 (IP68)	-50 … +120 ºC
	PT 1000-FAST	-50 … +110 ºC
For other models of probes, consult catalogue		

4.CONNECTIONS

The instrument is provided with pluggable screw terminal block to connect cables with a cross section up to 2.5 mm2. Heat-resistant cables have to be used. Before connecting cables

---

make sure the power supply complies with the instrument's requirements. Separate the probe cables from the power supply cables, from the outputs and the power connections. Do not exceed the maximum current allowed on each relay, in case of heavier loads use a suitable external relay.

4.1 GENERAL WARNINGS

Before connecting cables make sure the power supply complies with the instrument's requirements.
Separate the probe cables from the power supply cables, from the outputs and the power connections.

4.2 WIRING CONNECTIONS
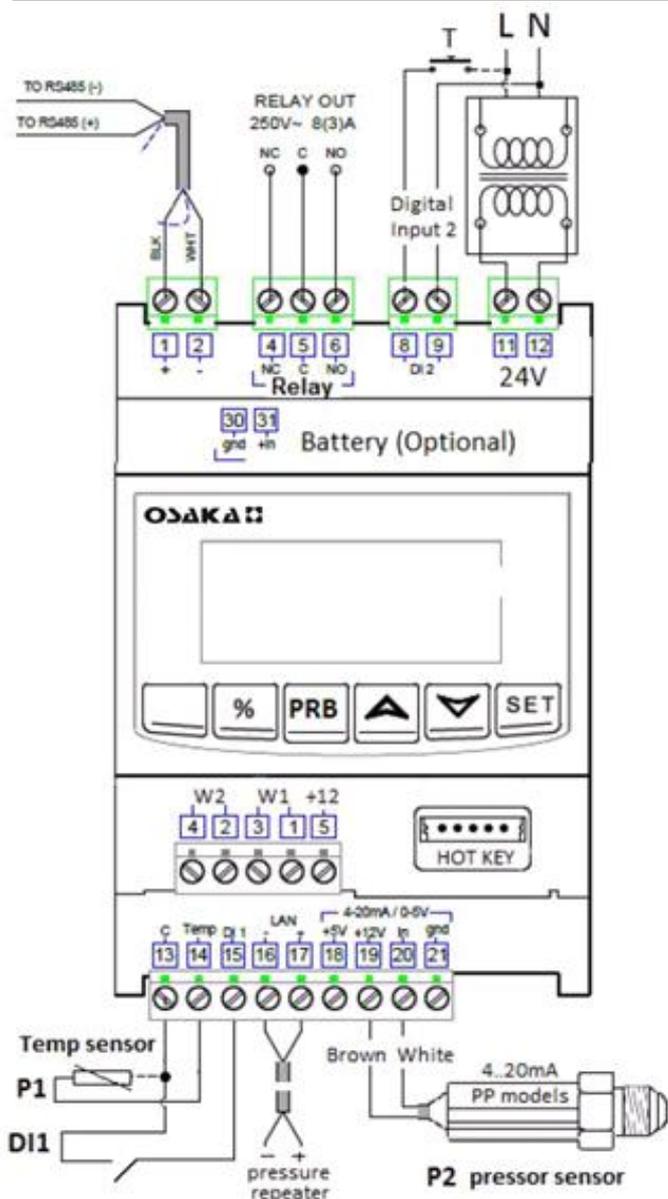

4.3 WIRING GUIDELINE

DEVICE TYPE	SUGGESTED CABLE
Analog temp sensor and Digital Input	AWG 22-2 SHIELDED, E.I. BELDEN #8761
RS-485 Network	AWG 22-2 SHIELDED, E.I. BELDEN #8761
Pressure transducer	AWG 22-2 SHIELDED, E.I. BELDEN #8761
Stepper valve	Use valve manufacturer's harness with a máximum length, not exceed 10 meters (30 feet).
Power loads and valve	Allow a máximum wire size of 14 AWG (2 mm^2)

4.4 TEMPERATURE PROBE MOUNTING

Advised temperature probe placement is illustrated in figure nearby. Between 0 and 180 inclination degrees respect to horizontal pipe section.
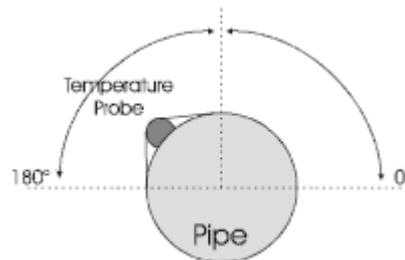

4.5 PROBE CONNECTION

4.5.1 General warnings

Pressure probe (4 - 20mA or ratiometric): respect the polarity. If using terminal ends be sure there are no bear parts which could cause short circuiting or introduce noise disturbance at high frequencies. To minimize the induced disturbances use shielded cables with the shield connected to earth.
Temperature probe: it is recommended to mount the temperature probe on the outlet of the evaporator heat/exchanger and to isolate it properly to detect the gas outlet temperature.

4.6 CONFIGURABLE DIGITAL INPUT CONNECTION

The superheat regulation is performed only when the **cooling digital input** is enabled.
It's possible to enable the SH regulation via:
- **Digital input 1, free voltage contact:**
Use the **terminals (13-15),** set the parameter **i1F = CCL,** its polarity it's set by par. **i1P**.
- **Digital input 2 (8-9), main voltage contact**
Use the **terminals (8-9),** set the parameter **i2F = CCL**, its polarity it's set by par. **i1P**
Usually the digital input is connected to a thermostat or an activation contact

---

T= Thermostat (or activation contact)
V= Stepper valve (mono or bipolar)
P1= Temperature sensor (PT1000 o NTC or NTC-US)
P2= Pressure transducer 4..20mA or ratiometric (0-5Vdc).

4.7 SUPPLY CONNECTION

Power supply: VEX 100 PA is powered at 24Vac/dc.
Use Class 2 transformer at list 20VA as the **TF20(24)**
Connect transformer to terminals 11-12.

4.8 VALVE CONFIGURATION

4.8.1 Before connecting the valve
- **ALWAYS CONNECT OR DISCONNET THE VALVE WHEN THE CONTROLLER IS NOT POWERED**
- **CONFIGURE THE VALVE ON THE VEX 100 PA BEFORE CONNECTING THE VALVE**
1. **BEFORE CONNECTING** the valve, to avoid possible problems, configure the driver by making the right changes on the parameters.
2. The max distance between an VEX controller and a valve **must not exceed 10 m**. To avoid any problems, use only **shielded cables** with section greater than or equal to 0.325 mm² (AWG22).
3. Select the kind of motor (**tEU parameter**) and check if the valve is present in **tEP parameter table** reported here below.

tEP		LSt (steps *10)	uSt (steps *10)	CPP (mA *10)	CHd (mA *10)	Sr (step/s)	tEu (bip /unip)	HSF (Half/ full)

Liability Limitation
All the pre-sets have been done according to the documentation available when the VEX 100 PA has been released, see below reference:

Danfoss:
- DKRCC.PD.VD1.C6.02 / 520H8021 @ Danfoss A/S (AC-MCI / sw), 2014-07

Sporlan:
- 92008 / Bulletin 100-20
- RACE Catalogue 100-20-3 EDEV-2/UK - 02/2013

Emerson
- FC-TD/ EX4-8 July 2008
In any case for each valve the only reference is given by the manual released by the manufacture together with the valve. Osaka Solutions can't be considered responsible for any change made by the manufacturer and reported on the manufacturer manual.
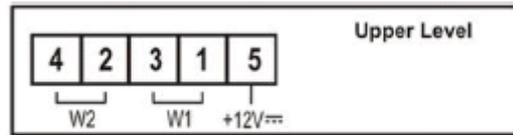

4.8.2 Manual setting of valve
To set the valve manually, act the according to the following procedure:
a. Set **tEP=0**
b. Then set following parameters: **LSt, USt, Sr, CPP, CHd** according to the valve manual.

4.9 VALVE CONNECTION

4.9.1 TERMINALS FOR VALVE CONNECTION

4 WIRES VALVES (BIPOLAR)

Connection numbering	ALCO EX	SPORLAN SEI-SEH	DANFOSS ETS
4	BLUE	WHITE	BLACK
2	BROWN	BLACK	WHITE
3	BLACK	RED	RED
1	WHITE	GREEN	GREEN

Válvulas 5-6 hilos (unipolares)

Connection numbering	EMERSON EX3	SPORLAN	SAGINOMIYA
4	BLUE	ORANGE	ORANGE
2	BLACK	RED	RED
3	BROWN	YELLOW	YELLOW
1	WHITE	BLACK	BLACK
5 - Common	GREY	GREY	GREY

AFTER MAKING THE CONNECTION, PLEASE SWITCH OFF AND ON THE VEX CONTROLLER IN ORDER TO BE SURE OF THE RIGHT POSITIONING OF THE VALVE.

4.10 ABSOLUTE MAXIMUM POWER

VEX100 PA is able to drive a wide range of stepper valves, in the following table are indicated the maximum values of current that the actuator can supply to the stepper wiring. The Osaka transformer to use is the **TF20(24)**.

NOTE: the electrical power absorption of the valve can be unrelated to refrigeration power that valve has. Before using the actuator, please read the technical manual of the valve supplied by the manufacturer and check the maximum current used to drive the valve in order to verify that they are lower than those indicated below.

VALVE TYPE	BIPOLAR VALVES (4 wires)	Maximum Current 0.9 A
	UNIPOLAR VALVES (5-6 wires)	Maximum Current 0.33 A

4.11 RS 485 SERIAL LINE

All models can be connected to the monitoring and supervising system XWEB3000. If **Mod=Std** standard ModBUS-RTU protocol is used, if **Mod=AdU custom XWEB library is required**. This last configuration makes possible to use the same serial address of the thermostat that gives the cooling request to VEX. In this way, it's possible to reduce the number of addresses used.

5. FRONTAL PANEL
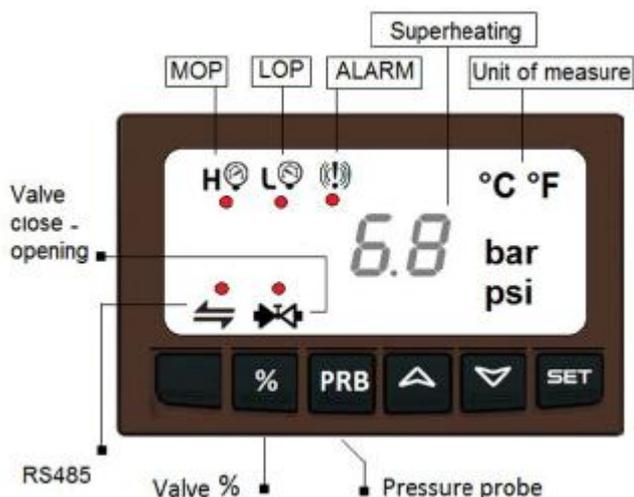

SET	To display and to modify the set point. In programming mode its selects a parameter or it confirms a value.
%	Push to display pressure to display the value 0..100% for valve opening a few seconds.
PRB	A pressure to display the value of pressure for a few seconds.
▲	By pressing and releasing this key, it's possible to see the values of the probes. In programming mode it slides the codes of the parameters or it increases their values.
▼	In programming mode it slides the codes of parameters or it decreases their values.

COMBINACIÓN DE TECLAS

▼ + ▲	To lock or to unlock the keyboard.
SET + ▼	To enter programming mode.

6.1 VEX100 PA LEDS

On display there are some luminous dots. Their meaning is described in the following table:

LED	MODE	Function
L◎	ON	Low pressure alarm
H◎	ON	Maximum Operating Pressure alarm
⋈	OFF	Valve is completely closed
⋈	BLINKING	Valve is moving
⋈	ON	Valve is completely opened
⇄	BLINKING	Serial communication present
⇄	OFF	Serial communication absent
⦀	ON	Superheat alarm

6. USER INTERFACE

6.1 FAST ACCESS MENU (DURING REGULATION)

1.- Press and release ▲ button.
2.- The variable available in the Fast Access menu are:
   CLP Cooling demand percentage
   tP1 Temperature from Probe 1
   PPr Pressure value from Probe2 transducer.
tP2 Suction temperatura obtained from pressure temperature table.
SH Value of superheat
StH Superheat set point
oPP Percentage of valve opening
d1S Free Voltage digital input status
d2S Main Voltage digital input status VAC
3.- Brows parameter labels with ▲ and ▼
4.- Press **SET** to see read-only value. To change parameter, press **SET**.
5.- To leave the fast Access menú, press and release **SET + ▲** or wait for time-out to expire (about 3 minutes).

NOTA: IF THE REGULATION IS NOT ENABLED THE CONTROLLER DISPLAYS "PMP".

6.2 HOW TO SEE THE SET POINT (SP)

1.- Press the set buttons until the set point will be showed.
2.- To come back to see temperatura, wait about 5s or press newly **SET key**

6.3 HOW TO MODIFY THE SET POINT (SP)

To change the set point value operate as follows:
1.- Press **SET** until the set point will be showed.
2.- Use ▲ and ▼ to change its value.
3.- Press **SET** to store the new value.

6.4 HOW TO ENTERING "PR1" PARAMETER MENU

To enter to " PR1" level menu :
1.- Press **SET + ▼** about 3 seconds..
2.- Instrument shows first parameter in Pr1 menu.

6.5 HOW TO ENTERING "PR2" PARAMETER MENU

To enter to "PR2" parameters list :
1.-Enter to "Pr1".
2.-Select "PR2" parameter and press **SET.**
3.-The "PAS" label will be shown, then "0.."with 0 blinking.
4.-Insert "321" password through UP and DOWN buttons, then press set to confirm.

6.6 HOW TO CHANGE A PARAMETERS VALUE

To change the parameter's value operate as follows:
1.- Enter the Programming mode by pressing the **SET + ▼** button for about 3s.
2.- Select the required parameter.
3.- Press the **SET** button to display the value.

4.- Use ▲ and ▼ tochange the value.
5.- Press **SET** to store the new value and move to the following parameter.

To exit: press ▲ and ▼ orwait 30s without pressing any button.
NOTE: the set value is stored even when the procedure is exited by waiting the time-out to expire..

7. PARAMETER LIST

NOTE: All pressure parameters are relativesor absolutes depending on the PrM parameter.

REGULATION

FtY	**Kind of gas:** type of gas used by plant. This is a fundamental parameter for correct functioning of all system. The table below contains the refrigerant gases managed by the XEV22D and their operating temperature

LABEL	REFRIGERANT	OPERATING RANGE
R22	r22	-50-60ºC/-58÷120ºF
134	r134A	-70-60ºC/-94÷120ºF
404	r404A	-50-60ºC/-58÷120ºF
47A	r407A	-50-60ºC/-58÷120ºF
410	r410	-50-60ºC/-58÷120ºF
507	r507	-70-60ºC/-94÷120ºF
47C	r407C	-50-60ºC/-58÷120ºF
47F	r407F	-50-60ºC/-58÷120ºF
290	r290-Propane	-50-60ºC/-58÷120ºF
CO2	r744-Co2	-50-60ºC/-58÷120ºF
450	r450A	-45-60ºC/-69÷120ºF
513	r513	-45-60ºC/-69÷120ºF
448	r448A	-45-60ºC/-69÷120ºF
449	r449A	-45-60ºC/-69÷120ºF

rEt	**Reaction time (**1÷100s; 0 = automatic time adjustment) time delay between valve position adjustments. It's the time between the valve adjustment command and when the valve is moved. **EI** With **rEt = 1** the valve is moved continuously, with **rEt = 10** the valve is moved every 10s, with **rEt = 0** the reaction time is calculated automatically by the system, according the SH variation. The range is between 6÷60s,
PEo	**Probe Error opening percentage:** (0 to 100%) if a temporary probe error occurs, valve opening percentage is **PEo** until **PEd** time is elapsed. If **PEO** is different from 0 it assures cooling also with probe error, because even if the device cannot calculate superheat the valve can work at **PEo** percentage.
PEd	**Probe Error delay before stopping regulation:** (0 to 239sec; 240=On=unlimited) if probe error duration is higher than **PEd,** valve will close completely and "**Pf**" message will be showed. With **PEd=on**, valve opening is **PEo** until probe error finishes.
tEU	**Type of Stepper motor:** (UP; bP) it permits to select the kind of valve. **UP** = Unipolar valves; **bP** = Bipolar valves. **!!!!! WARNING !!!!! This parameter has to be adjusted before connecting the valve.**

tEP	**Predefined valve selection:** (0 to15)						
tEP		LSt (steps *10)	uSt (steps *10)	CPP (mA *10)	CHd (mA *10)	Sr (step/s)	tEu (bip /unip)	HSF (Half/ full)

RACE Catalogue 100-20-3 EDEV-2/UK-02/2013

Emerson:
FC-TD/ EX4-8 July 2008

In any case for each valve the only reference is given by the manual released by the manufacture together with the valve.
Osaka can't be considered responsible for any change made by the manufacturer and reported on the manufacturer manual.

Manual valve setting
To set the valve manually, act the according to the following procedure:
a. Set **tEP=0**
b. Then set following parameters: **LSt**, **USt**, **Sr**, **CPP**, **CHd** according to the valve manual

HFS	**Kind of motor movement:** (HAF; FUL) - **HAF:**half step. Use this setting for the unipolar valve. - **FUL:**full step. Use this setting for the bipolar valve.
LSt	**Minimum number of steps:** (0 to USt (*10)) it permits to select the minimum number of steps. At this number of steps the valve should be closed. So it's necessary the reading of manufacturer datasheet to set correctly this parameter. It's the minimum number of steps to stay in advised range of functioning.

	!!!!! WARNING !!!!! **After changing this parameter the valve will have to be reinitialized. The device performs this procedure automatically and restarts its normal functioning when the programming mode ends.**
USt	**Maximum number of steps:** (LSt to 800 (*10)) it permits to select the maximum number of steps. At this number of steps the valve should be completely opened. Read the datasheet provided by manufacturer of the valve to set correctly this parameter. It's the maximum number of steps to stay in advised range of functioning. **!!!!! WARNING !!!!!** **After changing this parameter the valve will have to be reinitialized. The device performs this procedure automatically and restarts its normal functioning when the programming mode ends.**
ESt	**Extra step in closing phase:** (0 to 255 (*10)) it sets the number of extra steps the controller performs, when the valve is closed at start up, to force the closure of the valve.
Sr	**Step rate:** (10 to 600 step/sec) it is the maximum speed to change step without losing precision (=losing steps). It's advised to stay under the maximum speed.
CPP	**Current per phase (only bipolar valves):** (0 to 100 (*10mA)) it is the maximum current per phase used to drive valve. It's used **only with bipolar valves.**
CHd	**Holding current per phase (only bipolar valves):** (0 to 100 (*10mA)) it is the current per phase when the valve is stopped for more than 4 minutes. It's used **only with bipolar valves.**
OPE	**Start opening Percentage:** (0 to 100%) opening valve percentage when start function is active and during post defrost phase. This phase duration is **SFd time.**
SFd	**Start Function duration:** (0.0 to 42min 00s, res. 10s) it sets start function duration and post-defrost duration. **During this phase the alarms are not enabled.**
dty	**Pilot duty:** (2-10dec/sec) To reach the final position the valve moves for Ton sec and stops for Tof sec, where Ton and Tof are defined as in the following: Ton= dty/10s Toff= (1-dty/10)s **Note**: with dty=10 the Pilot duty function is disabled. With bipolar valve, during the Toff time the maintenance current is used.
MnF	**Maximum opening percentage at normal Functioning:** (0 to 100%) during regulation it sets the maximum valve opening percentage.
FoP	**Forced Opening percentage:** (0 to 100; nU) if **FoP=nU** valve works with regulation algorithm. If **FoP is different from nU** the valve stays at **FoP** opening percentage. This function could be useful during plant starting or during service operations.

AMS	**Self self adaptive SH regulation enabling:** parameter enables the self adaptive regulation of the superheat **no** = standard regulation using the PID parameters (Pb, rS, inC, dFC) **yES** = self-adaptive regulation, controller regulates SH automatically, setting the PID parameter

Atu	**Minimum STABLE superheat search (**No; yES) This parameter enables the search of the minimum stable superheat. The lowest admitted value is LSH+2°C
Pb	**Proportional band:** (0.1 to 50.0°C; 1 to 90°F) **PI** proportional band.
rS	**Band Offset:** (-12.0 to 12.0°C; -21 to 21°F) **PI** band offset. It permits to move the proportional band of the PI. With **rS=0** the band is between **[SEt to SEt+Pb]**.
inC	**Integration time:** (0 a 255 s)
dFc	**Derivative time:** (0 a 255 s)

tPP	**Type of Pressure transducer:** (420; 5V; LAn) it sets type of pressure transducer to use. **420** = 4 to 20mA pressure transducer; **5V** = 0 to 5V ratiometric transducer; **LAn** = the pressure signal comes from another VEX module.
LPP	**Enable pressure probe sending in LAN:** (n; Y) if **LPP=Y** the value of pressure read by device is sent in LAN. Only one device of the LAN can have **LPP=Y.**
PA4	**Probe value at 4mA or at 0V:** (-1.0 to P20 bar; -14 to P20 psi) pressure value measured by probe at 4mA or at 0V (related to **PrM** parameter).
P20	**Probe value at 20mA or at 5V:** (PA4 to 50.0 bar; PA4 to 725 psi) pressure value measured by probe at 20mA or at 5V (related to **PrM** parameter).
oPr	**Pressure probe calibration:** -12.0 to 12.0 bar; -174 to 174 psi.
tte	**Type of temperature probe:** (PtM; ntC) it allows to set the kind of probe used by the instrument: **PtM** = PT1000 probe, **ntC** = NTC-US probe.
ote	**Temperature probe calibration:** -12.0 to 12.0°C; -21 to 21°F.

i1P	**Digital Input 1 (Free of voltage) digital input polarity:** (cL, oP) **CL** = activated when closed; **oP** = activated when opened.
i1F	**Digital Input 1 (Free of voltage) digital input function:** (CCL, rL) **CCL** = cooling call; **rL** = digital input activates relay.

d1d	**Digital Input 1 (Free of voltage) activation delay:** (0 to 255 min) this activation delay is used only if digital input is configured as **rL**.
i2P	**Digital Input 2 (High voltage) digital input polarity:** (CL, oP) **CL** = activated when closed; **oP** = activated when opened.
i2F	**Digital Input 2 (High voltage) digital input function:** (CCL, rL) **CCL** = cooling call; **rL** = digital input activates relay.
d2d	**Digital Input 2 (High voltage) activation delay:** (0 to 255 min) this activation delay is used only if digital input is configured as **rL**.

ALARM

dAo	**Alarm delay after restarting regulation:** (0.0 to 42min 00s, res. 10s) time between digital input activation (configured as **CCL**) and alarm signalling. The **LSH** alarm is always signalled also during this time.
bon	**Enable buzzer:** (yes, no)
tba	**Mute relay alarm:** (yes, no)
tdA	**Type of alarm signalled by relay:** (ALL, SH, PrE, di) **ALL** = all alarm; **SH** = superheat alarm; **PrE**=pressure alarm; **di** = activation only when digital input configured as **rL** is active.
LPL	**Lower Pressure Limit for superheat regulation:** (PA4 to P20 bar; PA4 to P20 psi) when suction pressure comes down to **LPL**, the regulation is performed with a **LPL** fixed value for pressure. When suction pressure comes back to **LPL**, the normal pressure value is used (related to **PrM** parameter).
MOP	**Maximum Operating Pressure threshold:** (LoP to P20bar; LoP to P20 psi) if suction pressure exceeds maximum operating pressure value, the instrument signals this situation with an alarm LED (related to **PrM** parameter)
LOP	**Lowest Operating Pressure:** (PA4 to MoP bar; PA4 to MoP psi) if the suction pressure comes down to this value, a low pressure alarm will be signalled with an alarm LED (related to **PrM** parameter).
PHy	**Pressure alarm Hysteresis:** (0.1 to 5.0 bar, 1 to 72 psi) pressure hysteresis to disable alarm signalling.
dML	**Delta MoP-LoP:** (0 to 100%) when a **MoP** alarm occurs valve will close of the **dML** percentage every one second until **MoP** alarm is active. When **LoP** occurs, valve will open of the **dML** percentage every one second until **LoP** alarm is active.
MSH	**Maximum SuperHeat alarm:** (LSH to 80.0°C; LSH to 144°F) when superheat exceeds this value, an high superheat alarm will be signalled after interval **SHd**.
LSH	**Lowest SuperHeat alarm:** (0.0 to MSH°C; 0 to MSH°F) when superheat goes down to this value a low superheat alarm is signalled after interval **SHd**.
SHy	**SuperHeat alarm Hysteresis:** (0.0 to 25.5°C; 1 to 77°F) hysteresis for superheat alarm deactivation.
SHd	**SuperHeat alarm activation delay:** (0 to 255 s) when a superheat alarm occurs, the delay time **SHd** have to expire before signalling this alarm.
tdS	**Pressure stability index (**0-240s). The value used for the SH calculation is the average value of the pressure in the tdS time. Suggested values: tdS: 5-10 for heat exchanger or condensing unit tdS: 1-6 for supermarkets
tdt	**Temperature stability index (**0-240s). The value used for the SH calculation is the average value of the temperature in the tdt time. A value between 1-3 his suggested

DISPLAY

Lod	**Local display:** (SH; PEr; P1; P2) **SH** = superheat; **PEr** = valve opening percentage; **P1** = value of temperature measured; **P2** = pressure measured by P2 probe.
CF	**Temperature measurement units:** (°C; °F) **°C** = Celsius degree; **°F** = Fahrenheit degree. **NOTE:** by changing measurement unit, the regulation parameters have to be correctly changed.
PMu	**Pressure Measurement units:** (bAr, PSi) **bAr** = bar; **PSi** = psi. **NOTE:** by changing measurement unit, the regulation parameters have to be correctly changed.
rES	**Resolution (only °C):** (dE; in) **dE** = decimal format; **in** = integer format.
PrM	**Pressure visualization Mode:** (rEL; AbS) **rEL** = relative pressure; **AbS** = absolute pressure. **All pressure parameters depend on this parameter.**
CLP	**Cooling Percentage (read only):** Display the cooling percentage.
tP1	**Temperature Probe value (read only):** it shows temperature probe value from P1.
PPr	**Pressure probe value (read only**): it shows pressure probe value. The value depends on **PrM**.
tP2	**Temperature from P2 (read only**): it shows temperature obtained from conversion of pressure value.
SH	**Super heat value**
STH	**Superheat set point value**
OPP	**Opening Percentage (read only):** it shows the actual opening percentage of the valve.
d1S	**Free of voltage digital input State (read only):** it shows the free of voltage digital input.
d2S	**High voltage digital input State (read only):** it shows the high voltage digital input state.
Adr	**RS485 Serial Address:** (1 to 247) Identifies the instrument address when connected to a ModBUS compatible monitoring system.
Mod	**ModBus:** (AdU; Std) **AdU** = (Only for XWEB systems) in this case VEX and thermostatic controller are considered an alone instrument (it requires a custom library for XWEB); **Std** = to use VEX in stand-alone mode, in this case normal Modbus-RTU protocol is used.
Ptb	**Parameters map: (read only)** it identifies parameters map written by factory.
rEL	**Release Firmware: (read only)** it shows firmware release.
Pr2	**Second level menu**

8. FORCED OPENING

If necessary, by changing **FoP** parameter it's possible to force the valve opening. For example, by setting **FoP=50** the valve will be open at half of full scale. **To disable this function it's necessary to set FoP=nU** (default value). The valve opening is enabled only when CCL digital input is enabled.

9. DISPLAY MESSAGES

MESSAGE	CAUSE	OUTPUTS
"nA"	None of digital inputs configured as **CCL** are activated	Valve closed
"PF"	The Ped time is elapsed and the regulation is stopped	Valve closed after **PEd**. There is a probe error
"P1"	Temperature probe fault	According to **PEo** and **PEd**.
"P2"	Pressure transducer fault	According to **PEo** and **PEd**.
"HSH"	High superheat alarm	By PI
"LSH"	Low superheat alarm	Valve Closed
"LPL"	Low pressure limit	see **LPL** parameter
"MoP"	Maximum Operating Pressure	see **dML** parameter
"LoP"	Lowest Operating Pressure	see **dML** parameter
"StF"	Start Function enabled	see **SFd** parameter
"StP"	Regulation stop caused by **Std** and **Sti**	Valve closed
"EE"	Memory error	

9.1 ALARM RECOVERY

Probe alarms "**P1**", "**P2**" start few seconds after the fault in the probe; they automatically stop few seconds after the probe restarts normal operation. Check connections before replacing the probe.

Max. And min. Alarms "**HSH**", "**LSH**", "**MoP**" and "**LoP**" automatically stop as soon as the variable returns to normal values.

The instrument is provided with an internal check verifying memory integrity. Alarm "**EE**" will flash when a failure in the internal memory is detected. In such case call the service.

10. TECHNICAL DATA

Housing: self extinguishing ABS.
Case: 4 DIN modules 70x135mm with male and female connectors; depth 60mm.
Mounting: DIN RAIL mounted in an omega (3) din rail.
Protection: IP20.
Connections: pluggable screw terminal block □ 2.5 mm2 wiring.
Power supply: 24Vac/dc ±10%.
Power absorption: depending on connected valve 20VA max.
Display: three digits with icons, red LEDs, height 14.2 mm.
Inputs: 1 temperature probe:
PT1000 probe: -50 to 110°C (-58 to 230°F).
NTC probe: -40 to 110°C (-40 to 230°F).
1 pressure transducer: 4 to 20mA or 0 to 5V.
Digital inputs: 1 free of voltage.
1 high voltage.
Outputs for valve: bipolar or unipolar valves.
Data storage: on the non-volatile memory (EEPROM).
Kind of action: 1B.
Pollution degree: normal.
Software Class: A.
Operating temperature: 0 to 55°C (32 to 131°F).
Storage temperature: -25 to 60°C (-13 to 140°F).
Relative humidity: 20 to 85% (no condensing).
Resolution: 0.1°C or 1°F.
Precision a 25°C (77°F): ±0.7

11. STANDARD VALUES

Label	Description	Range	Default	Level
REGULATION				
FtY	Kind of gas	See parameter list	404	Pr2
rEt	Reaction time:	1 ÷ 100	1	Pr2
PEo	Probe Error opening percentage	0 ÷ 100	50	Pr2
PEd	Probe Error delay before stopping regulation	0 ÷ 239, On	On	Pr2
tEU	Type of Stepper motor	UP, bP	bP	Pr2
tEP	Automatic Valve configuration	Un, 0 ÷ 14	nu	Pr2
HFS	Kind of driving	HAF, FUL	FUL	Pr2
LSt	Minimum number of steps	0 a USt (*10))	**0**	Pr2
USt	Maximum number of steps	0 ÷ 800	0	Pr2
ESt	Extra steps in closing phase	0 ÷ 255	0	Pr2
Sr	Step rate	10 ÷ 600	10	Pr2
CPP	Current per phase (only bipolar valves)	0 ÷ 100	0	Pr2
CHd	Holding current per phase (only bipolar valves)	0 ÷ 100	0	Pr2
OPE	Start opening percentage	0 ÷ 100	80	Pr2
SFd	Start function duration	0.0 ÷ 42.0	0.3	Pr2
Dty	Pilot workload:	2 ÷ 10	10	Pr2
MnF	Máximum opening percentage	0 ÷ 100	100	Pr2
FoP	Forced opening time-out	0 ÷ 100, nu	nu	Pr2
PI PARAMETERS (trained staff)				
AMS	Self self adaptive SH regulation enabling	Y, n	n	Pr2
Atu	Superheat set point	Y, n	n	Pr2
Pb	Proportional band	0.1 ÷ 50.0	12.0	Pr2
rS	Band offset	-12.0 ÷ 12.0	0.0	Pr2
inC	Integration time	0 ÷ 255	180	Pr2
dFc	Derivative time	0 ÷ 255	2	Pr2
PROBE PARAMETERS				
tPP	Type of pressure transducer	Lan, 05, 420	420	Pr2
LPP	Enable pressure probe sending in KAN	Y, n	N	Pr2
PA4	Probe value at 4mA or at 0V (relate9d to PrM parameter)	-1.0 ÷ P20	-0.5	Pr2
P20	Probe value at 20mA or at 5V (related to PrM parameter)	PA4 ÷ 50.0	11.0	Pr2
oPr	Pressure probe calibration	-12.0 ÷ 12.0	0.0	Pr2
tte	Typeof temperatura probe	PtM, NTC	PtM	Pr2
ote	Temperature probe calibration	-12.0 ÷ 12.0	0.0	Pr2
DIGITAL INPUTS				
i1P	Free of voltage digital input polarity	cL, OP	CL	Pr2
i1F	Freeof voltage digital input function	CCL, rL	CCL	Pr2

d1d	Digital input 1 (free of voltage) activation delay	0 ÷ 255	0	Pr2
i2P	Main voltage digital input polarity	cL, OP	CL	Pr2
i2F	Main voltage digital input function	CCL, rL	CCL	Pr2
d2d	Digital input 2 (Main voltage) activation	0 ÷ 255	0	Pr2
ALARMS				
dAo	Alarm delay after restarting regulation	0.0 ÷ 42.0	10.0	Pr2
tdA	Type of alarm signalled by relay	ALL, SH, PRE, DI	ALL	Pr2
bon	Buzzer enabling	Y, n	N	Pr2
tbA	Alarm relay silencing	Y, n	N	Pr2
LPL	Lower pressure limit for superheat regulation (related to PrM parameter)	PA4 ÷ P20	-0.5	Pr2
MOP	Maximum operating pressure threshold(related to PrM parameter	LoP ÷ P20	11.0	Pr2
LOP	Minimum suction pressure limit (related to PrM parameter)	PA4 ÷ MOP	-0.5	Pr2

12. WARRANTY

This device has a guarantee in form of repair or replacement by manufacturing defects in materials of 12 months from the date of purchase.
OSAKA SOLUTIONS automatically void this guarantee and is not liable for any damages deriving from:
- Use, installation, or use and handling undue, others than those described above and, in particular, differs from the safety requirements established by the regulations.
- Use in applications, machines or electrical panels that do not provide adequate protection against liquids, dust, grease and electric shocks to the installation conditions made.
- The inexperienced handling, and / or alteration of the product.
- The installation / use in applications, machines or electrical panels do not comply with the valid norm.

In case of defective product under warranty or out of that period, it should contact the post sales service to perform the necessary steps. Request document repair "RMA" (by mail or fax) and complete it, is necessary send the RMA and the device to SAT OSAKA by method prepaid.
